Architecture and Landscape of the Pennsylvania Germans, 1720-1920 Sally McMurry 2011-03-08 The phrase "Pennsylvania German architecture" likely conjures images of either the "continental" three-room house with its huge hearth and five-plate stoves, or the huge Pennsylvania bank barn with its projecting overshoot. These and other trademarks of Pennsylvania German architecture have prompted great interest among a wide audience, from tourists and genealogists to architectural historians, antiquarians, and folklorists. Since the nineteenth century, scholars have engaged in field measurement and drawing, photographic documentation, and careful observation, resulting in a scholarly conversation about Pennsylvania German building traditions. What cultural patterns were being expressed in these buildings? How did shifting social, technological, and economic forces shape architectural changes? Since those early forays, our understanding has moved well beyond the three-room house and the forebay barn. In *Architecture and Landscape of the Pennsylvania Germans, 1720-1920*, eight essays by leading scholars and preservation professionals not only describe important architectural sites but also offer original interpretive insights that will help advance understanding of Pennsylvania German culture and history. Pennsylvania Germans' lives are traced through their houses, barns, outbuildings, commercial buildings, churches, and landscapes. The essays bring to bear years of field observation as well as engagement with current scholarly perspectives on issues such as the nature of "ethnicity," the social construction of landscape, and recent historiography about the Pennsylvania Germans. Dozens of original measured drawings, appearing here for the first time in print, document important works of Pennsylvania German architecture, including the iconic Bertolet barns in Berks County, the Martin Brandt farm complex in Cumberland County, a nineteenth-century Pennsylvania German housemill, and urban houses in Lancaster.

The Book of Wood Carving Charles Marshall Sayers 1978-01-01 "This is an absolutely first-rate book for beginners in wood sculpture, well thought out and well executed. It is exceptional in the quality of its illustrations, and contains many original and unusual conceptions and designs."--E. J. Tangerman. In answer to complaints from students that there was no concise, simple text on wood carving, Charles Marshall Sayers, a nationally famous teacher and craftsman, wrote this book. It is still the finest book for the beginning student in wood sculpture. In clear, straightforward language, Sayers carefully guides the reader through the fundamentals--what tools and materials to use, how to use them. There are lessons and designs for incised carving, relief carving, and other cutting methods. Sayers discusses woods suitable for carving, stains and finishes, preliminary and advanced methods of preparing woods for finishing, even how to make a workbench. The 34 illustrated designs for over 34 projects encourage the student to build slowly and methodically a sound, practical technique while creating objects of beauty and utility. All of the projects employ only four tools (one straight parting tool, three different sizes of straight gouges). With this book you can make panels for cabinets, chests, and doors; borders; table aprons; chair and bench rails; circular mirror frame; wall bracket with shelf; bookends; rectangular mirror frame; footstools; guest-book covers; mirror frame with half-circle top; holy water font; and doors. Though "The Book of Wood Carving "is meant for the beginner, experienced carvers will find that Sayers' original conceptions and designs will increase their own pleasure and skill. "Stimulating both by spicy text and large photographs showing every point in processes described . . . [Illustrated with] designs of actual work by the author--a famous teacher and craftsman--and his students and apprentices."--"Books, New York Herald Tribune. "Unabridged (1978) republication of original (1942) edition.

The Built-Up Ship Model Charles G. Davis 1989-12-01 A classic in its field, THE BUILT-UP SHIP MODEL is an expert guide aimed at model builders with experience, patience, and a passion for building "the real thing". Photographs illustrate day-to-day work in progress. Over 100 drawings demonstrate correct implementation of the more complex instructions. In his introduction, the author chronicles the exciting career of the LEXINGTON and the role it played in

America's fight for freedom.
