The World That Trade Created Steven Topik 2017 The World That Trade Created brings to life the history of trade and its actors. In a series of brief, highly readable vignettes, filled with insights and amazing facts about things we tend to take for granted, the authors uncover the deep historical roots of economic globalization. Covering over seven hundred years of history, this book, now in its fourth edition, takes the reader around the world from the history of the opium trade to pirates, to the building of corporations and migration to the New World. The chapters are grouped thematically, each featuring an introductory essay designed to synthesize and elaborate on key themes, both familiar and unfamiliar. It includes ten new essays, on topics ranging from the early modern ivory and slave trades across the Indian Ocean, to the ways in which the availability of new consumer goods helped change work habits in both Europe and East Asia, and from the history of chewing gum to that of rare earth metals. The introductory essays for each chapter, the overall introduction and epilogue, and several of the essays have also been revised and updated. The World That Trade Created continues to be a key resource for anyone teaching world history, world civilization, and the history of international trade.

From Parents to Children John Ermisch 2012-05-01 Does economic inequality in one generation lead to inequality of opportunity in the next? In *From Parents to Children*, an esteemed international group of scholars investigates this question using data from ten countries with

differing levels of inequality. The book compares whether and how parents' resources transmit advantage to their children at different stages of development and sheds light on the structural differences among countries that may influence intergenerational mobility. How and why is economic mobility higher in some countries than in others? The contributors find that inequality in mobility-relevant skills emerges early in childhood in all of the countries studied. Bruce Bradbury and his coauthors focus on learning readiness among young children and show that as early as age five, large disparities in cognitive and other mobility-relevant skills develop between low- and high-income kids, particularly in the United States and the United Kingdom. Such disparities may be mitigated by investments in early childhood education, as Christelle Dumas and Arnaud Lefranc demonstrate. They find that universal pre-school education in France lessens the negative effect of low parental SES and gives low-income children a greater shot at social mobility. Katherine Magnuson, Jane Waldfogel, and Elizabeth Washbrook find that income-based gaps in cognitive achievement in the United States and the United Kingdom widen as children reach adolescence. Robert Haveman and his coauthors show that the effect of parental income on test scores increases as children age; and in both the United States and Canada, having parents with a higher income betters the chances that a child will enroll in college. As economic inequality in the United States continues to rise, the national policy conversation will not only need to address the devastating effects of rising inequality in this generation but also the potential consequences of the decline in mobility from one generation to the next. Drawing on unparalleled international datasets, *From Parents to Children* provides an important first step.

The Mises Institute is thrilled to bring back this popular guide to ridiculous economic policy from the ancient world to modern times. It covers the ancient world, the Roman Republic and Empire, Medieval Europe, the first centuries of the U.S. and Canada, the French Revolution, the 19th century, World Wars I and II, the Nazis, the Soviets, postwar rent control, and the 1970s.
