Contentious Curricula Amy J. Binder 2009-01-10 This book compares two challenges made to American public school curricula in the 1980s and 1990s. It identifies striking similarities between proponents of Afrocentrism and

creationism, accounts for their differential outcomes, and draws important conclusions for the study of culture, organizations, and social movements. Amy Binder gives a brief history of both movements and then describes how their challenges played out in seven school districts. Despite their very different constituencies--inner-city African American cultural essentialists and predominately white suburban Christian conservatives--Afrocentrists and creationists had much in common. Both made similar arguments about oppression and their children's well-being, both faced skepticism from educators about their factual claims, and both mounted their challenges through bureaucratic channels. In each case, challenged school systems were ultimately able to minimize or reject challengers' demands, but the process varied by case and type of challenge. Binder finds that Afrocentrists were more successful in advancing their cause than were creationists because they appeared to offer a solution to the real problem of

urban school failure, met with more administrative sympathy toward their complaints of historic exclusion, sought to alter lower-prestige curricula (history, not science), and faced opponents who lacked a legal remedy comparable to the rule of church-state separation invoked by creationism's opponents. Binder's analysis yields several lessons for social movements research, suggesting that researchers need to pay greater attention to how movements seek to influence bureaucratic decision making, often from within. It also demonstrates the benefits of examining discursive, structural, and institutional factors in concert.

Post Traumatic Slave Syndrome Joy a Degruy 2017-09-11 In the 16th century, the beginning of African enslavement in the Americas until the ratification of the Thirteenth Amendment and emancipation in 1865, Africans were hunted like animals, captured, sold, tortured, and raped. They experienced the worst kind of physical, emotional, psychological, and spiritual abuse. Given such history, isn't it likely that many of the enslaved were severely traumatized? And did the trauma and the effects of such horrific abuse end with the abolition of slavery?

Emancipation was followed by one hundred more years of institutionalized subjugation through the enactment of Black Codes and Jim Crow laws, peonage, convict leasing, domestic terrorism and lynching. Today the violations continue, and when combined with the crimes of the past, they result in yet unmeasured injury. What do repeated traumas, endured generation after generation by a people produce? What impact have these ordeals had on African Americans today? Dr. Joy DeGruy, answers these questions and more. With over thirty years of practical experience as a professional in the mental health field, Dr. DeGruy encourages African Americans to view their attitudes,

assumptions, and behaviors through the lens of history and so gain a greater understanding of how centuries of slavery and oppression have impacted people of African descent in America. *Post Traumatic Slave Syndrome* helps to lay the necessary foundation to ensure the well-being and sustained health of future generations and provides a rare glimpse into the evolution of society's beliefs, feelings, attitudes and behavior concerning race in America.

A Guide to Obesity and the Metabolic Syndrome George A. Bray 2011-03-28 In the historical record there is abundant evidence that obesity was a medical and health concern as long as medicine has been practiced. The idea of diet and exercise are bulwarks in the fight against obesity in history from the time of Hippocrates to the 16th century—a span of 2,000 years. However, our scientific understanding of this problem is only a little over 200 years old. An examination of the root cause of what many consider the obesity epidemic, *A Guide to Obesity and the Metabolic Syndrome* traces the origins and types of obesity and its treatment. Examining in detail the developing treatment for obesity, this book provides: A history of obesity,

including treatment, proposed causes, and perceptions An examination of the causes and problems associated with obesity A discussion of lifestyle, diet, exercise, and treatment strategies A detailed look at the medications and surgeries available for obesity The fact that we have an epidemic of obesity today that is covering the globe suggests that the strategically simple ideas of eating less and exercising more, ideas that require commitment and personal involvement by the individual, have not been very successful. As we move forward in trying to understand this problem, we need to be alert to strategies and tactics that may not require individual motivation and commitment—history has shown that they do not work well. This book supplies guidance on developing and designing novel strategic interventions against obesity and metabolic disorders.

Younger Sara Gottfried, M.D. 2017-03-07 NEW YORK TIMES BESTSELLER The New York Times bestselling author of The

Hormone Cure and The Hormone Reset Diet shows every woman how to create a lifestyle that will help her look great, feel energized, and slow down the effects of aging. Feel destined for cellulite, saddle bags, and belly fat? Does your family come from a long line of Alzheimer's, cancer, or heart disease? Will nothing help your aging skin or declining libido or flagging energy? This book is for you. The body is magnificent but it doesn't come with a lifetime warranty, or an operating manual. You're the result of millions of years of evolution, but many of the adaptations that helped your ancestors survive are now working overtime to accelerate the aging process. The assumption here is that we are our genes and therefore trapped by the past. The good news is that your genetic code—the DNA sequence that is the biochemical basis of heredity—can play a minor role in the way you age. The scientific reality is that 90 percent of the signs of aging and disease are caused by lifestyle choices, not your genes. In other words, you have the capability to overcome and transform your genetic history and tendencies. Harvard/MIT-trained physician Sara Gottfried, M.D. has created a revolutionary 7-week program that empowers us to make the critical choices necessary to not just look young, but also feel young. Dr. Gottfried identifies and builds this book around the five-key factors that lead to accelerated aging -the muscle factor, the brain factor, the hormone factor, the gut factor, and the toxic fat factor. The 7-week program addresses these factors and treats them in an accessible and highly practical protocol and is as follows: Feed—Week 1 Sleep—Week 2 Move—Week 3 Release—Week 4 Expose—Week 5 Soothe—Week 6 Think—Week 7 Younger increases not only your lifespan, but also your healthspan. Dr. Gottfried's program makes

it possible to change the way you age, stay younger longer, and remain healthy and vibrant for all of your days.

Melanin: Richard D. King 2012-03-03 A Study of ancient African history reveals an early African definition of the human Melanin System as a whole body Black Melanin System that serves as the eye of the soul to produce inner vision, true spiritual consciousness, creative genius, beatific vision, to become Godlike, and to have conversation with the immortals (Ancestors). The purpose of ancient African education was to provide knowledge and development of the will of the student that allowed salvation (freedom) of the soul from the fetters (chains) of the physical body (George G. M. James, Stolen Legacy

From Atlantis to the Sphinx Colin Wilson 2004-07-01 In this compelling book, Colin Wilson argues that thousands of years before ancient Egypt and Greece held sway, there was a great civilization whose ships traveled the world from China to Antarctica. Their advanced knowledge of science, mathematics, and astronomy was passed on to descendants who escaped to Egypt and South America. From Atlantis to the Sphinx bases this assertion on a true fact: that archaeologists and geologists are at odds over the age of the Sphinx. Archaeologists claim that the Sphinx dates to classical dynastic Egypt, around 2,400 b.c. But some geologists claim that it could have been built as early as 7,000 to 10,500 b.c. The geologists' claim is based on the curious fact that the erosion of the Sphinx is more characteristic of water erosion than that of wind and sand. Starting from the assumption that there was an advanced civilization in existence much earlier than previously thought, Wilson goes on to claim that it could very well be Atlantis--

not a literal island that sank, but more of a great civilization that either declined naturally or experienced a great catastrophe, passing on only a fraction of its knowledge to other peoples. From Atlantis to the Sphinx delves into what might have been a completely different knowledge system from that of modern man--one as alien to us as that of the Martians. The book sets out to reconstruct that ancient knowledge in a fascinating exploration of the remote depths of history, a ground-breaking attempt to understand how these long-forgotten peoples thought, felt, and communicated with the universe.

Abraham Lincoln's Journey to Greatness 2011

The Female Brain Louann Brizendine, M.D. 2007-08-07 Since Dr. Brizendine wrote *The Female Brain* ten years ago, the response has been overwhelming. This New York Times bestseller has been translated into more than thirty languages, has sold nearly a million copies between editions, and has most recently inspired a romantic comedy starring Whitney Cummings and Sofia Vergara. And its profound scientific understanding of the nature and experience of the female brain continues to guide women as they pass through life stages, to help men better understand the girls and women in their lives, and to illuminate the delicate emotional machinery of a love relationship. Why are women more verbal than men? Why do women remember details of fights that men can't remember at all? Why do women tend to form deeper bonds with their female friends than men do with their male counterparts? These and other questions have stumped both sexes throughout the ages. Now, pioneering neuropsychiatrist Louann Brizendine, M.D., brings together the latest findings to show how the unique structure of the female brain determines how

women think, what they value, how they communicate, and who they love. While doing research as a medical student at Yale and then as a resident and faculty member at Harvard, Louann Brizendine discovered that almost all of the clinical data in existence on neurology, psychology, and neurobiology focused exclusively on males. In response to the overwhelming need for information on the female mind, Brizendine established the first clinic in the country to study and treat women's brain function. In *The Female Brain*, Dr. Brizendine distills all her findings and the latest information from the scientific community in a highly accessible book that educates women about their unique brain/body/behavior. The result: women will come away from this book knowing that they have a lean, mean, communicating machine. Men will develop a serious case of brain envy.

African-Centered Education Kmt G. Shockley 2020-07-31

This volume brings together leading scholars and practitioners to address the theory and practice of African-centered education. The contributors provide (1) perspectives on the history, methods, successes and challenges of African-centered education, (2) discussions of the efforts that are being made to counter the miseducation of Black children, and (3) prescriptions for—and analyses of—the way forward for Black children and Black communities. The authors argue that Black children need an education that moves them toward leading and taking agency within their own communities. They address several areas that capture the essence of what African-centered education is, how it works, and why it is a critical imperative at this moment. Those areas include historical analyses of African-centered education; parental perspectives; strategies for working with Black children; African-

centered culture, science and STEM; culturally responsive curriculum and instruction; and culturally responsive resources for teachers and school leaders. **If the Universe Is Teeming with Aliens ... WHERE IS EVERYBODY?** Stephen Webb 2002-10-04 In a 1950 conversation at Los Alamos, four world-class scientists generally agreed, given the size of the Universe, that advanced extraterrestrial civilizations must be present. But one of the four, Enrico Fermi, asked, "If these civilizations do exist, where is everybody?" Given the fact that there are perhaps 400 million stars in our Galaxy alone, and perhaps 400 million galaxies in the Universe, it stands to reason that somewhere out there, in the 14 billion-year-old cosmos, there is or once was a civilization at least as advanced as our own. Webb discusses in detail the 50 most cogent and intriguing solutions to Fermi's famous paradox.

Why Darkness Matters Edward Bruce Bynum 2005 Asking the question, Are people with dark skin truly different?, these essays consider the history, science, and psychology of melanin. With contributions from such noted writers and scholars as Hunter Adams, Ann Brown, Richard King, and Owen Moore, these writings explore the history of people with surface skin melanin. The genetic influence of melanin on culture and learning is also addressed, with a specific look at the unfair treatment of African American children in schools that has led to poor IQ test scores and disproportionate numbers of African American children in special education classes. *Destruction of Black Civilization: Great Issues of a Race From: 4500 B.C to 2000 A.D* Chancellor Williams 2019-11-04 This is a widely read classic exposition of the history of Africans on the continent, the people of African descent in the United States and in the

diaspora. This is well researched scholarly work detailing the development of civilisation in Africa and its destruction

"Race" and Racism R. Perry 2007-10-15 'Race' and Racism examines the origins and development of racism in North America. It addresses the inception and persistence of the concept of 'race' and discusses the biology of human variance, addressing the fossil record of human evolution, the relationship between creationism and science, population genetics, 'race'-based medicine, and other related issues. The book explores the diverse ways in which people in a variety of cultures have perceived, categorized, and defined one another without reference to any concept of 'race.' It follows the history of American racism through slavery, the perceptions and treatment of Native Americans, Jim Crow laws, attitudes toward Irish and Southern European immigrants, the internment of Japanese Americans during World War II, the civil rights era, and numerous other topics.

The Art of Being Human Michael Wesch 2018-08-07

Anthropology is the study of all humans in all times in all places. But it is so much more than that.

"Anthropology requires strength, valor, and courage," Nancy Scheper-Hughes noted. "Pierre Bourdieu called anthropology a combat sport, an extreme sport as well as a tough and rigorous discipline. ... It teaches students not to be afraid of getting one's hands dirty, to get down in the dirt, and to commit yourself, body and mind. Susan Sontag called anthropology a "heroic" profession." What is the payoff for this heroic journey? You will find ideas that can carry you across rivers of doubt and over mountains of fear to find the the light and life of places forgotten. Real anthropology cannot be contained in a book. You have to go out and feel the world's

jagged edges, wipe its dust from your brow, and at times, leave your blood in its soil. In this unique book, Dr. Michael Wesch shares many of his own adventures of being an anthropologist and what the science of human beings can tell us about the art of being human. This special first draft edition is a loose framework for more and more complete future chapters and writings. It serves as a companion to anth101.com, a free and open resource for instructors of cultural anthropology. This 2018 text is a revision of the "first draft edition" from 2017 and includes 7 new chapters.

Anti-Semitism F. Schweitzer 2005-11-03 In this provocative book, Marvin Perry and Frederick M. Schweitzer analyze the lies, misperceptions, and myths about Jews and Judaism that anti-semites have propagated throughout the centuries. Beginning with antiquity, and continuing into the present day, the authors explore the irrational fabrications that have led to numerous acts of violence and hatred against Jews. The book examines ancient and medieval myths central to the history of anti-semitism: Jews as 'Christ-killers', instruments of Satan, and ritual murderers of Christian children. It also explores the scapegoating of Jews in the modern world as conspirators bent on world domination; extortionists who manufactured the Holocaust as a hoax designed to gain reparation payments from Germany; and the leaders of the slave trade that put Africa in chains. No other book has focused its attention exclusively on a thematic discussion of historic and contemporary anti-semitic myths, covering such an expansive scope of time, and allowing for such a painstaking level of exemplification. Anti-semitism is an essential book that will serve as a corrective to bigotry, stereotype, and historical distortion.

Ancient Civilizations of Africa G. Mokhtar 1981-01-01 Deals with the period beginning at the close of the Neolithic era, from around the eighth millennium before our era. Chapters 17 to 20 describe the part of Africa later called the Maghrib and its Saharan hinterland. Chapters 21 to 29, the rest of Africa as well as some of the islands of the Indian Ocean.--Publisher's description

Advances in Computational and Bio-Engineering S. Jyothi 2020-07-06 This book gathers state-of-the-art research in computational engineering and bioengineering to facilitate knowledge exchange between various scientific communities. Computational engineering (CE) is a relatively new discipline that addresses the development and application of computational models and simulations often coupled with high-performance computing to solve complex physical problems arising in engineering analysis and design in the context of natural phenomena. Bioengineering (BE) is an important aspect of computational biology, which aims to develop and use efficient algorithms, data structures, and visualization and communication tools to model biological systems. Today, engineering approaches are essential for biologists, enabling them to analyse complex physiological processes, as well as for the pharmaceutical industry to support drug discovery and development programmes.

Melanin, the Chemical Key to Black Greatness : the

Harmful Effects of Toxic Drugs on Melanin Centers Within the Black Human Carol Barnes 1988

Made to Stick Chip Heath 2007-01-02 NEW YORK TIMES BESTSELLER • The instant classic about why some ideas thrive, why others die, and how to make your ideas stick. “Anyone interested in influencing others—to buy, to vote, to learn, to diet, to give to charity or to start a revolution—can learn from this book.”—The Washington Post Mark Twain once observed, “A lie can get halfway around the world before the truth can even get its boots on.” His observation rings true: Urban legends, conspiracy theories, and bogus news stories circulate effortlessly. Meanwhile, people with important ideas—entrepreneurs, teachers, politicians, and journalists—struggle to make them “stick.” In *Made to Stick*, Chip and Dan Heath reveal the anatomy of ideas that stick and explain ways to make ideas stickier, such as applying the human scale principle, using the Velcro Theory of Memory, and creating curiosity gaps. Along the way, we discover that sticky messages of all kinds—from the infamous “kidney theft ring” hoax to a coach’s lessons on sportsmanship to a vision for a new product at Sony—draw their power from the same six traits. *Made to Stick* will transform the way you communicate. It’s a fast-paced tour of success stories (and failures): the Nobel Prize-winning scientist who drank a glass of bacteria to prove a point about stomach ulcers; the charities who make use of the Mother Teresa Effect; the elementary-school teacher whose simulation actually prevented racial prejudice. Provocative, eye-opening, and often surprisingly funny, *Made to Stick* shows us the vital principles of winning ideas—and tells us how we can apply these rules to making our own messages stick.
When Doctors Kill Joshua A. Perper 2010-06-14 It would

come as no surprise that many readers may be shocked and intrigued by the title of our book. Some (especially our medical colleagues) may wonder why it is even worthwhile to raise the issue of killing by doctors. Killing is clearly unethical to the Art and Science of Medicine, which is geared toward easing pain and suffering and to saving lives rather than smothering them. Doctors should be a source of comfort rather than a cause for alarm. Nevertheless, although they often don't want to admit it, doctors are people too. Physicians have the same genetic library of both endearing qualities and character defects as the rest of us but their vocation places them in a position to intimately interject themselves into the lives of other people. In most cases, fortunately, the positive traits are dominant and doctors do more good than harm. While physicists and mathematicians paved the road to the stars and deciphered the mysteries of the atom, they simultaneously unleashed destructive powers that may one day bring about the annihilation of our planet. Concurrently, doctors and allied scientists have delved into the deep secrets of the body and mind, mastering the anatomy and physiology of the human body, even mapping the very molecules that make us who we are. But make no mistake, a person is not simply an elegant biological machine to be marveled at then dissected.

The Millionaire Fastlane MJ DeMarco 2011-01-04 10TH ANNIVERSARY EDITION Is the financial plan of mediocrity -- a dream-stealing, soul-sucking dogma known as "The Slowlane" your plan for creating wealth? You know how it goes; it sounds a lil something like this: "Go to school, get a good job, save 10% of your paycheck, buy a used car, cancel the movie channels, quit drinking expensive Starbucks mocha lattes, save and penny-pinch your life away, trust your life-savings to the stock market, and one day, when you are oh, say, 65 years old, you can retire rich." The mainstream financial gurus have sold you blindly down the river to a great financial gamble: You've been hoodwinked to believe that wealth can be created by recklessly trusting in the uncontrollable and unpredictable markets: the housing market, the stock market, and the job market. This impotent financial gamble dubiously promises wealth in a wheelchair -- sacrifice your adult life for a financial plan that reaps dividends in the twilight of life. Accept the Slowlane as your blueprint for wealth and your financial future will blow carelessly asunder on a sailboat of HOPE: HOPE you can find a job and keep it, HOPE the stock market doesn't tank, HOPE the economy rebounds, HOPE, HOPE, and HOPE. Do you really want HOPE to be the centerpiece for your family's financial plan? Drive the Slowlane road and you will find your life deteriorate into a miserable exhibition about what you

cannot do, versus what you can. For those who don't want a lifetime subscription to "settle-for-less" and a slight chance of elderly riches, there is an alternative; an expressway to extraordinary wealth that can burn a trail to financial independence faster than any road out there. Why jobs, 401(k)s, mutual funds, and 40-years of mindless frugality will never make you rich young. Why most entrepreneurs fail and how to immediately put the odds in your favor. The real law of wealth: Leverage this and wealth has no choice but to be magnetized to you. The leading cause of poorness: Change this and you change everything. How the rich really get rich - and no, it has nothing to do with a paycheck or a 401K match. Why the guru's grand deity - compound interest - is an impotent wealth accelerator. Why the guru myth of "do what you love" will most likely keep you poor, not rich. And 250+ more poverty busting distinctions... Demand the Fastlane, an alternative road-to-wealth; one that actually ignites dreams and creates millionaires young, not old. Change lanes and find your explosive wealth accelerator. Hit the Fastlane, crack the code to wealth, and find out how to live rich for a lifetime.

Religion of White Rage Finley Stephen C. Finley 2020-09-21 Critically analyses the historical, cultural and political dimensions of white religious rage in America, past and present This book sheds light on the phenomenon of white rage, and maps out the uneasy relationship between white anxiety, religious fervour, American identity and perceived black racial progress. Contributors to the volume examine the sociological construct of the "e;white labourer"e;, whose concerns and beliefs can be understood as religious in foundation, and uncover that white religious fervor

correlates to notions of perceived white loss and perceived black progress. In discussions ranging from the Constitution to the Charlottesville riots to the evangelical community's uncritical support for Trump, the authors of this collection argue that it is not economics but religion and race that stand as the primary motivating factors for the rise of white rage and white supremacist sentiment in the United States. Nutricide Llailla O Afrika 2013-05-28 A pioneer work in the field of health, Nutricide gives bold insights into holistic health and clearly is a brilliant fire for African nutritional liberation. African Origin of Biological Psychiatry Dr Richard D King 2012-03-01

The Gastro-Archeologist Jeremy Woodward 2021-02-03 In order to understand common conditions such as coeliac

disease and Crohn's disease, one must view the gut in its evolutionary context. This is the novel approach to the gut and its diseases that is adopted in this book. The first part tells the story of the evolution of the gut itself – why it came about and how it has influenced the evolution of animals ever since. The second part focuses on the evolution of immunity and how the layers of immune mechanisms are retained in the gut, resembling the strata revealed in an archeological dig. The final part, 'The Gastro-Archeologist', ties the first two together and highlights how understanding the gut and immune system in their evolutionary context can help us understand diseases affecting them. Ambitious in its scope but telling a unique story from a refreshingly novel perspective, the book offers an informative and enjoyable read. As the story of the gut, immunity and disease unfolds, the author aims to endow readers with the same sense of awe and excitement that the subject evokes in him. Difficult concepts are illustrated using simple and colourful analogies, and the main content is supplemented with anecdotes and unusual and amusing facts throughout the book. The book is intended for anyone with an interest in the gut, its immunity and diseases, ranging from school and college biology and biomedical students, to professionals working in the field, and to patients suffering from intestinal diseases who want to understand more about their conditions.
